

Who we are

ENTEL Chile started as a market monopoly in 1964 and privatized between 1988 and 1994, ENTEL Chile has been the leading carrier in Chile for three and a half decades. ENTEL Chile is a dynamic telecommunications giant with world class standards and services. The company is able to respond quickly and efficiently to ever-changing market challenges, in a secure and consistent manner, with a wide variety of products and services offered through state-of-the-art systems. As part of its vast network, ENTEL currently counts on more than 70 direct routes to countries around the world through both fiber-optic and satellite connections. Among the services ENTEL offers are local telephony through its affiliate ENTEL Phone, internet, call center, international and domestic long distance, prepaid card, 800#, home country direct, mobile PCS technology through affiliate ENTEL PCS, private leased line, VSAT, frame relay and international carrier services.

Americatel Corporation, established in Florida in 1992, provides reliable telecommunication services to major corporations, as well as to end users through its 10-10-123 CIC code. Americatel Corporation was the first foreign-owned company granted a 214 license by the FCC to operate in the United States. The company was built on the business premise that an explosion of trade and commerce in the Americas had created new requirements for voice and data communications services between American companies and their distant divisions and customers in the region. A need had arisen for higher quality telecommunications services for business and in-country and intra-regional network solutions. Currently, Americatel Corporation offers a variety of private and public telecommunications services, including IBS, VSAT, frame relay, Internet, direct access long distance telephony and international carrier services.

Americatel El Salvador, also founded in 1992, has been making history in Central American telecommunications as a market leader in private telecommunications services. In 1998 expansions in operations for public services started, with a full carrier licence via its CIC code 158. Added to this, our points of presence in Guatemala – and in Nicaragua and Honduras in the near future – consolidate our leadership in the region. Private and public telecommunications services include IBS, VSAT, local network design and connection, contracted long distance telephony and international carrier services.
